

DEPLOYING ENERGY-EFFICIENCY MEASURES TO PHASE OUT GAS IMPORTS

[November 2022]

Retrofitting windows with high performance glazing

Upgrading lighting systems with LED

Balancing hydronic heating systems

Equipping residential building with wastewater heat recovery systems

Insulating pipes in district heating, vessels, tanks & boilers in industry

Raising awareness & engage with citizens

Replacing radiator valves with new thermostats

Providing adequate cushioning for energy prices

Adding 20 cm of insulation in attics & roofs

Accelerating the use of energy audits

Activating demand side flexibility

Installing heat pumps in efficient buildings

Using building automation & energy management systems

155 BCM

is Russian gas imported by the EU in 2021

116 BCM

is gas import that can be reduced by 2030 if we increase renewables & the target in the Energy Efficiency Directive from **9%** to at least **13%**
